B2B Prospect Research Database

B2B Lead Generation and Prospect Research | Prepared by Suresh Yadav

DEMONSTRATION PROJECT - this is a fictional sample workflow, not a real client assignment. All 20 records are fictional and unverified.

01 Project objective

Demonstrate a repeatable process for organizing and qualifying possible B2B SaaS prospects for a fictional service provider offering website design, messaging improvement and social media support. The goal is to show research structure and data discipline, not to claim completed lead sourcing or buying intent.

02 Target customer profile

Target market	Small B2B SaaS companies and startups, illustratively 1-50 employees.
Decision-maker roles	Founder, Co-Founder, CEO, Head of Marketing, Marketing Manager.
Potential needs	Website redesign, clearer positioning, landing-page copy, social content consistency, content planning or marketing support.
Relevant categories	Developer tools, analytics, CRM, workflow automation, cloud operations, finance operations and adjacent B2B software.

03 Research methodology

1. Define	Apply the target industry, company-size and decision-maker criteria.	**2. Find**	Check company-owned sites, public professional pages and reputable directories.
3. Capture	Save source URLs, observations and research dates in the record.	**4. Qualify**	Score only supported evidence; separate observations from hypotheses.
5. Verify	Confirm current role and permitted public business contact route before outreach.	**6. Review**	Flag duplicates, stale details, missing sources and uncertain fit.

04 Lead qualification framework

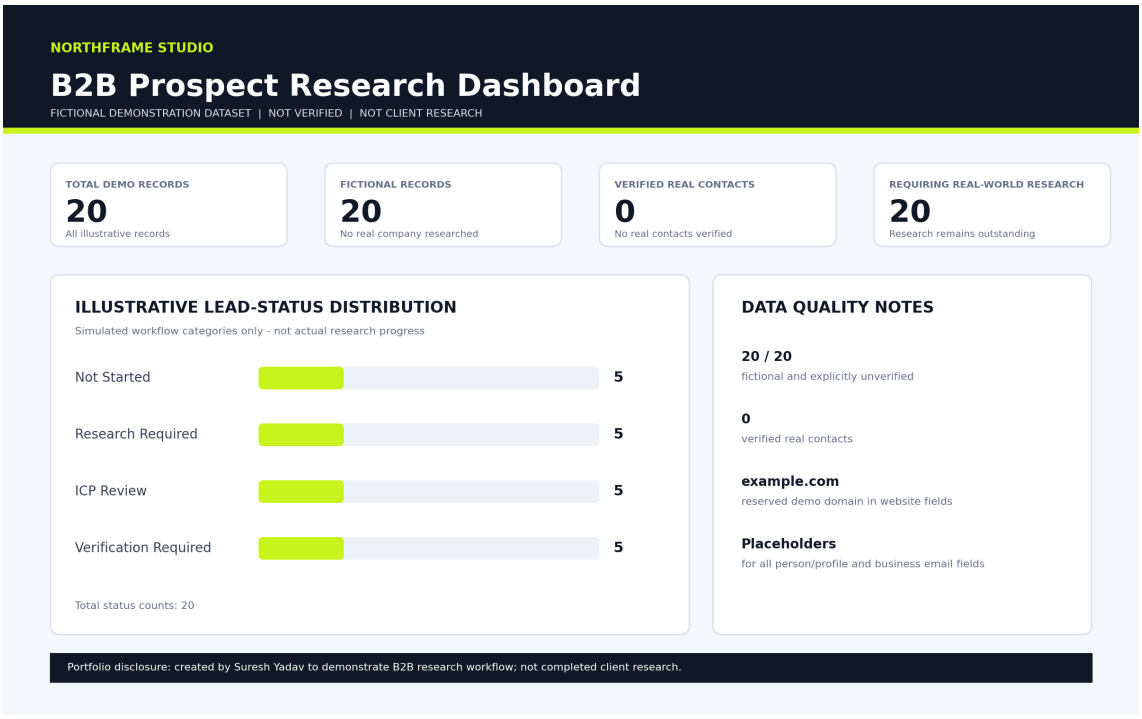

Criterion	Points	Example interpretation
Industry relevance	0-2	Clearly B2B SaaS earns the highest industry-fit score.
Company size fit	0-2	Small business / startup in target range scores higher.
Decision-maker role	0-2	Current, relevant role must be publicly confirmed.
Potential need evidence	0-2	Specific public evidence is stronger than a hypothesis.
Public business information	0-2	Reliable, permitted company information is available.

Classification bands: 8-10 = high potential fit - requires verification; 5-7 = possible fit - further research needed; 0-4 = low fit - deprioritise. Scores prioritize research only and do not indicate purchase intent.

PROJECT OUTPUTS & DATA GOVERNANCE

Dashboard, quality rules and deliverables

The visual summary below matches the 20-record demonstration workbook.

05 Data fields collected

Lead ID; fictional company name; industry; reserved example.com website URL; company LinkedIn placeholder; company size; country; target decision-maker role; professional profile placeholder; business email placeholder; research-source note; potential business need; illustrative ICP fit score; simulated lead status; verification status; and research notes.

06 Data quality and verification rules

- Every row is marked DEMO DATA - NOT VERIFIED. Website values use example.com; person/profile and email fields are placeholders.

- In a real workflow, check each company website, confirm the relevant role, store legitimate source URLs and dates, and validate any permitted business contact information.

- Use publicly available professional information only, subject to applicable law and platform terms. Do not scrape private or restricted data, collect sensitive personal information, or invent identities or contact details.

- Keep potential ICP fit separate from verified prospect status. Public visibility alone does not prove need, budget, intent or consent to contact.

07 Final deliverables

Excel workbook	Four editable sheets: Prospect Database, Ideal Customer Profile, Lead Qualification, Summary Dashboard.
CSV dataset	20 illustrative records with the same prospect fields.
PNG preview	High-resolution dashboard snapshot for portfolio presentation.
PDF case study	Research process, target profile, rubric, dashboard and verification rules.

Portfolio disclosure: This fictional demonstration project was created by Suresh Yadav to demonstrate B2B lead research and qualification skills. The dataset does not contain 20 verified real leads and must not be presented as completed client research.
